

6 GHz — Ping Latency: Idle vs During 20 Mbps UDP Stream

UDP: ROCK 5A -> macOS | Ping measured concurrently

Idle mean: 1.45 ms | Under 20 Mbps UDP: macOS->ROCK 5A 1.62 ms, ROCK 5A->macOS 1.65 ms | iperf UDP jitter (receiver): 0.15 ms | Note: iperf jitter is inter-arrival time, not ICMP RTT
